

christof@beupoil.de

Dipl.-Ing. Christof Beupoil holds a degree in Mechanical Engineering from RWTH Aachen, Germany. His studies were focused on energy conversion – including renewable energies. He has built his first AWE-Converter in 1992 as successful Jugend Forscht contribution:

„Mal eben schauen, was die Kollegen so machen“: Jens-Steffen Glaser (l.), jüngster Teilnehmer des Wettbewerbes vor dem später preisgekrönten Modell eines computer-gesteuerten Lenkdrachen-Steuersystems.

While his professional life led him to co-found and grow a successful software business he has followed and analyzed most AWE related publications over the last twenty years. As an outcome he has created a unified model and a set of success criteria for AWE that can be found under www.pigpower.org
